

11.)

Project Name	Functional & Security Testing
Client Name	Vishal Fabrications, SaveMyKids
Industry	Information Technology
Challenges (Work)	One of our new clients reached out to us because they want to test their android application as well as 2 websites. They are required to perform security and functional testing of their business applications.
Type	Functional Testing & Penetration Testing
Project Duration	2 Months
Outcome	This is the most challenging project we have ever done because their websites and android application didn't work properly. So We worked with their development team to fix the issues. At first we have taken android applications

	<p>and by performing functional testing we made sure applications run smoothly on all devices, then we have taken client websites and fixed lots of issues related to website functionality. After this process, we started security assessment and penetration testing of their business applications. And we finished with solid output. And the client is very happy now:-)</p>
