

**Project Category: Malware Removal, System/Server Administration, Network Security, Forensics**

Project Name	Windows Server 2016 Rootkit Problem
Client Name	Individual Client(Confidential) in US
Industry	Information Technology & Services
Challenges (Work)	The clients reached out to us because they suspect they're being watched and monitored by rootkits. Because their server behaves awkwardly. Client knows a little bit of technology, so they identified it as rootkit. But they want to solve this problem forever and never want it to happen again.
Type	IT Support & Services, Malware Removal, Network Security
Project Duration	2 Days
Outcome	Our expert team of malware analysts, network security specialists started working and identified three potential dangerous IPs and reported them to the client. And also removes the rootkit and the server is now perfect in terms of speed and computing power.
