

Project Category: Web Application Security, Penetration Testing, API Security, Python with AI/ML

Project Name	Python based Web And API Pentesting
Client Name	Finalytics.AI
Industry	Finance, Banking and Investment
Challenges (Work)	The client reached out to us because they have developed the website and back-end API and before they take them live, it is required to do a pentesting and vulnerability assessment.
Type	Vulnerability Assessment, Penetration Testing, Web and API Security Assessment
Project Duration	10 Days
Outcome	Our expert team of penetration testers are working and found critical security bugs that affect their reputation and business logic. And our team ad clien's development team worked together to fix ASAP. We also give them a document which has everything reported in the proper way along with the remedies.
