

**Project Category: Cloud Security, Penetration Testing, IT
Security Compliance & Auditing**

Project Name	AWS Cloud Security Pentesting
Client Name	One of the Client (Confidential)[From South Africa]
Industry	Finance and banking
Challenges (Work)	The client invited our team to perform a security audit of their cloud infrastructure(AWS based) on their premise (On site project). We need to go to the client's place and then assess in front of them.
Type	Security Compliance Auditing, Cloud Security Assessment, Network Security
Project Duration	1 to 1.5 Months
Outcome	Our team reached the SA(South Africa, Johannesburg) airport and then the client explained about how his company is working and what our work is like. After a quick on-site meeting, we started working. We started cloud security assessment testing(AWS) and completed with desired outcome, then the client approved our work and then we need to conduct an on site audit of ISO 27001 Compliance. So we did it and the client was very happy.
