

Project Category: Cloud Security, Penetration Testing, IT Consulting & Managed Service Providing

Project Name	Azure Infrastructure migration and security assessment
Client Name	One of the largest USA Technology Services provider (Confidential)
Industry	Technology
Challenges (Work)	One of our clients reached out to us because they need to migrate their existing Google Infrastructure to Azure infrastructure and along with migration, we need to assess cloud security assessment and penetration testing. Clients also required documentation of work.
Type	Cloud Security, Vulnerability Assessment & Penetration Testing, Network Security, System & Network Administration
Project Duration	3 Months
Outcome	Our team first migrated their data to a safe place which is isolated from the company infrastructure and then we cleaned the data. After this, we performed a migration to Azure Infrastructure. Then we safely restored data and started cloud security VAPT. We found lots of configs, security bugs, Remote Code Execution bugs and account takeover bugs. We then contacted clients and elaborated on the risks of these security issues and implemented emergency patches. Client was very happy and agreed to work with us only in the future.
